ASSUMPTIONS (placeholders were empty)

- Provider/region: AWS us-east-1, single region. Network: 1 VPC 10.0.0.0/16, 2 AZs, public + private subnets per AZ.
- Compute: ALB (internet-facing, multi-AZ) + ECS Fargate containers. NAT Gateways for outbound-only egress.
- Data: Aurora PostgreSQL Multi-AZ (primary writer + read replica), ElastiCache Redis per AZ, Amazon S3 via gateway endpoint.
- Edge: Route 53 (DNS), CloudFront (CDN/TLS), AWS WAF. All external access terminates at the edge; no direct public compute.
