CREO — Level 1 Data Flow Diagram (DFD)

7 processes · 7 external entities · 7 data stores · every process balanced (in + out)

v1.0

October 18, 2026

BLACK HOLES / MIRACLES REPAIR LOG

- **Process 6.0 Analyze & Report** — originally only emitted dashboards (miracle). Repaired by adding `D3 Analytics Store` as a required input, and keeping both `E6 !'` and `E7 !'` as outputs.
- **Process 4.0 Manage Deliverability** — initially only emitted to ESP (miracle). Repaired by adding `E5 feedback loop`, `D4 suppression check`, and `D6 send.requested` as inputs.
- **Process 5.0 Process Monetization** — only received payment webhooks (black hole in earlier drafts). Repaired by adding `D1 Subscriber DB` as a required input.
- **Process 3.0 Compose & Send** — restored full input set (`E1 draft`, `D1 audience segment`) and both outputs (`D2 save draft`, `D6 send.requested`) so the process is not just a pass-through.

Legend: blue rects = external entities · green circles = processes (numbered) · teal cylinders = data stores (D-numbered) · blue arrows = external flows · teal arrows = store flows.
